

# Contents

<b>1. Introduction</b>	<b>1</b>
1.1. Motivation . . . . .	1
1.2. State of the art . . . . .	2
1.3. Goal of this work . . . . .	4
<b>2. Theoretical foundation of efficient high-brightness diode lasers</b>	<b>7</b>
2.1. Introduction to AlGaAs/InGaAs based diode lasers . . . . .	7
2.1.1. Threshold gain and current . . . . .	10
2.1.2. Optical output power . . . . .	11
2.1.3. Power conversion efficiency . . . . .	13
2.1.4. Influence of residual heat on laser performance . . . . .	14
2.2. Factors limiting output power and conversion efficiency . . . . .	15
2.3. Spectral gain and stabilization . . . . .	18
2.3.1. Spectral material gain . . . . .	18
2.3.2. Principles of spectral stabilization . . . . .	19
2.4. Beam quality and brightness . . . . .	21
2.5. Concepts of high-brightness diode lasers . . . . .	22
2.6. Concepts for incoherent power scaling and beam combining . . . . .	24
<b>3. Experimental setup and measurement errors</b>	<b>27</b>
3.1. Light-current characteristic . . . . .	27
3.2. Wavelength and spectra . . . . .	28
3.3. Lateral near and far field profiles, and beam quality . . . . .	29
3.4. Polarization . . . . .	30
<b>4. Spectrally unstabilized FP-NBA lasers</b>	<b>33</b>
4.1. Design considerations for FP-NBA lasers . . . . .	34
4.1.1. Factors limiting $BPP_{lat}$ in broad area lasers . . . . .	34
4.1.2. Stripe geometries . . . . .	35
4.1.3. Epitaxial layer structures . . . . .	36
4.2. From FP-BA to FP-NBA lasers . . . . .	40
4.2.1. Device fabrication . . . . .	40
4.2.2. Experimental results . . . . .	40
4.2.3. Conclusion . . . . .	49

<b>5. Spectrally stabilized DFB-NBA lasers</b>	<b>51</b>
5.1. Design considerations for monolithic spectral stabilization . . . . .	52
5.1.1. DFB versus DBR lasers . . . . .	52
5.1.2. Fabrication of gratings . . . . .	53
5.1.3. Wavelength and detuning . . . . .	55
5.2. Simulation of surface etched DFB gratings . . . . .	57
5.2.1. Coupled mode theory . . . . .	57
5.2.2. Transfer matrix approach . . . . .	59
5.2.3. Calculation of coupling coefficient $\kappa$ . . . . .	64
5.2.4. Eigenmode expansion and propagation modeling . . . . .	65
5.3. Iteration I - Baseline realization of DFB-NBA lasers . . . . .	69
5.3.1. Simulation and fabrication of gratings . . . . .	69
5.3.2. Experimental results . . . . .	72
5.3.3. Conclusion . . . . .	79
5.4. Iteration II - Influence of residual layer thickness $d_{res}$ . . . . .	81
5.4.1. Simulation and fabrication of gratings . . . . .	82
5.4.2. Experimental results . . . . .	84
5.4.3. Transfer from single emitters to array . . . . .	91
5.4.4. Conclusion . . . . .	92
5.5. Iteration III - Epitaxial fine tuning for DFB-NBA lasers . . . . .	95
5.5.1. Simulation and fabrication of gratings . . . . .	96
5.5.2. Experimental results . . . . .	98
5.5.3. Conclusion . . . . .	101
<b>6. Summary and Outlook</b>	<b>103</b>
6.1. Summary . . . . .	103
6.2. Outlook . . . . .	106
<b>Appendix</b>	<b>109</b>
<b>A. Influence of lateral structures in FP-NBA lasers</b>	<b>111</b>
<b>B. FBH-nomenclature of chip material</b>	<b>125</b>
<b>C. List of Abbreviations</b>	<b>129</b>
<b>D. List of Symbols</b>	<b>131</b>
<b>D. List of Figures</b>	<b>135</b>
<b>E. List of Tables</b>	<b>139</b>
<b>Bibliography</b>	<b>141</b>
