1	Introduction	1
1.1	General Remarks.....	1
1.2	Natural products as antibacterials.....	4
1.2.1	Overview	4
1.2.2	Targets of antibacterials.....	7
1.2.3	Sources of antibacterials.....	11
1.2.4	Phytotoxins.....	17
1.3	Albicidin.....	20
1.3.1	General remarks	20
1.3.2	<i>Xanthomonas albilineans</i>	20
1.3.3	Phytotoxic activity.....	22
1.3.4	Structure elucidation	23
1.3.5	Mode of action	25
1.3.6	Albicidin resistance mechanisms.....	28
1.3.7	The biosynthesis of albicidin	32
1.4	Natural derivatives of albicidin.....	38
1.4.1	Discovery of the natural albicidin derivatives	38
1.4.2	Relevance of the natural albicidin derivatives	39

2	Aim of this work	49
3	Results and Discussion	51
3.1	General remarks	51
3.2	Identification of new members of the albicidin family via spectral networking	52
3.3	Possible biosynthetic pathways towards the natural albicidin derivatives	58
3.4	Total synthesis of the natural albicidin derivatives	61
3.4.1	Retrosynthetic analysis and possible routes towards the new albicidin derivatives ..	61
3.4.2	Synthesis of β -methoxy asparagine as building block C	64
3.4.3	Synthetic attempts towards the central tripeptide	74
3.4.4	Synthesis of the C-terminal tripeptides	76
3.4.5	Selective formation of tetrapeptides	79
3.4.6	Preparation and introduction of the N-terminal dipeptides	83
3.4.7	Deprotection and purification of the natural albicidin analogues	86
3.5	Conformation of the postulated structures and stereochemical assignment	89
3.6	Synthesis of structural analogues of cystobactamid	94
3.7	Bioactivity evaluation of the albicidin and cystobactamid families	102
3.8	Synopsis of previous synthetic studies on albicidin and cystobactamid	107
3.9	Conclusion and final remarks	118
4	Experimental Part	123
4.1	General information	123
4.1.1	Equipment	123
4.1.2	Reagents and solvents	124
4.1.3	Chromatography	124
4.1.4	NMR spectroscopy	124

4.1.5	mass-spectrometry	125
4.1.6	Nomenclature	125
4.2	Spectral networking	126
4.2.1	Isolation and purification of albicidin and its derivatives	126
4.2.2	Analysis via GNPS	126
4.3	Synthetic protocols	128
4.3.1	Synthesis of Boc- β -methoxy asparagine	129
4.3.2	Synthesis of the C-terminal tripeptides	135
4.3.3	Formation of the C-terminal tetrapeptides	142
4.3.4	Synthesis of the N-terminal building blocks	148
4.3.5	Formation of the fully protected albicidin derivatives	153
4.3.6	Carbamoylation and global deprotection of albicidins	159
4.3.7	Formation of aromatic cystobactamid building blocks	166
4.3.8	Synthesis of the N ₃ - β -methoxy asparagine	174
4.3.9	Formation of cystobactamid tetrapeptides	178
4.3.10	Formation and global deprotection of cystobactamid analogues	180
4.3.11	Other compounds and reagents	186
4.4	Biological testing	192
4.4.1	Microdilution assay	192
4.4.2	DNA-Gyrase inhibition assay	192
5	References	193
6	Appendix	207
