1	Introduction	1
1.1	Aim and Scope of This Work	2
1.2	Organization of This Work	3
2	Fundamentals	4
2.1	Fundamentals of Fuel Cell	4
2.1.1	Thermodynamics Fundamentals	5
2.1.2	Gibbs Free Energy	7
2.1.3	Nernst Voltage	9
2.2	Fundamentals of Combined Heat and Power With District Heating	10
2.2.1	Fundamentals of District Heating	10
2.2.2	Intelligent District Heating	11
2.3	Comprehensive Modeling Tree	13
3	Multi-Physics Transients Modeling of Solid Oxide Fuel Cells: Methodology of Circuit Equivalent and Use in EMTP-type Simulation	15
3.1	Introduction	15
3.2	Modeling Concept	16
3.3	Modeling of Electric Transients	18
3.3.1	Mathematical Description	18
3.3.2	Implementation	21
3.4	Modeling of Pneumatic Transients	22
3.4.1	Mathematical description	22

3.4.2	Implementation	24
3.5	Modeling of Thermal Transients	25
3.5.1	Mathematical description	26
3.5.2	Implementation	27
3.6	Integration of Electric, Pneumatic and Thermal Transients	28
3.7	Validation	30
3.7.1	Polarization Curve Validation	30
3.7.2	Fast Transients	30
3.7.3	Slow Transients	32
3.8	Application: Multi-physics Load-following Transients of CHP Plant	33
3.8.1	Electric and Pneumatic Load-following Transient	36
3.8.2	Thermal Load-following Transient	37
3.8.3	Hydrogen Supply System	38
3.9	Conclusions	39
4	Parameter Identification of SOFC Model Based on Multi-Objective Optimization	41
4.1	Introduction	41
4.2	Basic Concepts	44
4.2.1	Multi-Objective Optimization	44
4.2.2	Mechanism Introduction of the Standard MVMO	45
4.3	Multi-Objective Mean Variance Mapping Optimization	46
4.3.1	Basic Techniques for Pareto Ranking	47
4.3.2	Extension of MVMO for Multi-Objective Optimization	49
4.3.3	Main Algorithm	51
4.4	Problem Formulation	52
4.4.1	Objective Functions	52
4.4.2	Metrics of Performance	54
4.5	Simulation Results and Comparison	56
4.5.1	Comparison	57
4.5.2	Solution Chosen and Validation	59

4.6	Conclusions	60
5	Modeling and Feasibility Evaluation of CHP Integrated District Heating in EMTP-Type Simulation	62
5.1	Introduction	62
5.2	System Concept	64
5.3	Modeling of CHP System Using SOFCs in EMTP-type Simulation	66
5.3.1	Modeling of the Components in CHP System	68
5.3.2	Implementation of SOFC-CHP	76
5.3.3	SOFC-CHP Efficiency	78
5.4	Modeling of District Heating Networks in EMTP-type Simulation	80
5.4.1	Modeling of Pipes	80
5.4.2	Modeling of Forks	85
5.4.3	Modeling of Loads	87
5.4.4	Piecing the Components Together	96
5.5	Test Simulations	98
5.5.1	Test Case for Pipe	98
5.5.2	Space Heating With SOFC-CHP	99
5.5.3	Feasibility Evaluation for CHP Based District Heating Networks	100
5.6	Conclusions	108
6	Distributed Droop Control for CHP Integrated District Heating System	110
6.1	Introduction	110
6.2	Outline of an Intelligent District Heating System	112
6.3	Droop Control in District Heating System	114
6.3.1	Review of Droop Control in Electrical DC Grids	114
6.3.2	Droop Control in District Heating Network	115
6.4	Simulation Results	120
6.4.1	Case 1: Load Steps From 120 kW to 180 kW	121
6.4.2	Case 2: Load Steps From 120 kW to 420 kW	123
6.4.3	Case 3: Daily Simulation for Summer Case	125

6.5	Conclusions	127
7	Conclusions	128
A	Effective Partial Pressures Calculation for 1-D Solid Oxide Fuel Cell Model	130
A.1	Anode	130
A.2	Cathode	131
B	Modeling Tank and Boiler for CHP integrated District Heating Networks	133
B.1	Thermal Storage Tank	133
B.1.1	Mathematical Description	133
B.1.2	Implementation	136
B.1.3	Validation	138
B.2	Peak Boiler	139
B.2.1	Mathematical Description	139
B.2.2	Implementation	140
C	District Heating Network Test Case	142
D	Parameter Calculation and Configuration of Pipes in Residential District Heating Network	144
D.1	Thermal Resistance of Heat Loss	144
D.2	Thermal Capacitance of the Mass in the Pipe	145
D.3	Parameter Configurations of Pipes of Residential District Heating Network	146
D.4	Heat Load Profile	148
E	Terminology	150
E.1	Symbols	150
E.1.1	Upper Case Letters	150
E.1.2	Lower Case Letters	152
E.1.3	Greek Letters	154
E.1.4	Additional Recurrent Subscripts and Superscripts	155
E.2	Acronyms	156
