Abstract i

Acknowledgments v

1 Introduction 1
- 1.1 Problem Statement . . . 1
- 1.2 Contributions . . . 3
- 1.3 Thesis Outline . . . 6

2 Dynamics and Active Vibration Control of the Lightweight Stress-Ribbon Footbridge 7
- 2.1 Static and Dynamic Characteristics of a Stress-Ribbon Bridge . . . 7
- 2.2 Dynamics of the CFRP Stress-Ribbon Footbridge . . . 12
  - 2.2.1 Structural Characteristics . . . 13
  - 2.2.2 Finite-Element Modelling and Modal Characteristics . . . 14
  - 2.2.3 Pedestrian-Induced Vibration of the Stress-Ribbon Bridge . . . 23
  - 2.2.4 Time-Varying Modal Characteristics of the Footbridge . . . 26
- 2.3 Active Vibration Control of the Stress-Ribbon Bridge . . . 28
  - 2.3.1 Experimental Setups . . . 30
  - 2.3.2 Vibration Control with State-Space Models . . . 35
  - 2.3.3 State-Space Modelling with White-Box Models . . . 38

3 Experimental System Identification for Active Vibration Control 45
- 3.1 Introduction . . . 45
- 3.2 Black-Box System Identification Based on SIM . . . 47
  - 3.2.1 Subspace Identification Algorithm . . . 47
  - 3.2.2 Modal Transformation and Model Validation . . . 49
- 3.3 Black-Box Identification Based on SIM . . . 52
  - 3.3.1 Design of Stochastic Excitation Signals . . . 53
  - 3.3.2 Experimental Subspace Identification . . . 54
  - 3.3.3 Model Validation . . . 60
- 3.4 Grey-Box Identification Based on PEM . . . 63
  - 3.4.1 Predefined Model Structure . . . 63
  - 3.4.2 Parameter Estimation and Model Verification . . . 67

3.4.3 Comparative Analysis of Black-Box and Grey-Box System Identification . . . 73
3.5 Summary . . . 75

4 Multi-Modal State Estimation Based on Inertial Sensors 77
4.1 Introduction . . . 77
4.2 Drift-free Estimation of Velocity/Displacement from an Accelerometer . . . 80
4.2.1 Band-Limited Multiple FLC . . . 80
4.2.2 Estimation of BMFLC with KF . . . 81
4.2.3 Calculation of Displacements and Velocities . . . 82
4.3 State Estimation of Vertical and Torsional Modes in Setup C . . . 84
4.3.1 Sensor Information Fusion from Multiple Sensors . . . 84
4.3.2 Weighted Fusion KF with Inertial Sensors . . . 86
4.4 Experimental Verification of Multi-Modal State Estimation . . . 86
4.4.1 Experimental Verification of Nodal State Estimation with Accelerometers . . . 87
4.4.2 Experimental Verification of Rotation Angles with Gyroscopes . . . 89
4.4.3 Real-Time Estimation of Vertical and Torsional Modes . . . 90
4.5 Conclusions . . . 93

5 Multi-Modal Active Vibration Control for the Stress-Ribbon Bridge 95
5.1 Challenges in AVC of the Bridge . . . 96
5.2 Modal Control Law for AVC of the Bridge . . . 97
5.2.1 Modal Control Law of Multiple Modes of Interest . . . 98
5.2.2 Optimal Sensor Position for Modal State Estimation . . . 101
5.2.3 Multi-Modal Control of the Stress-Ribbon bridge . . . 110
5.2.4 Time-Delayed Modal Velocity Feedback Control . . . 112
5.3 Stability Analysis due to Changing Modal Characteristic . . . 120
5.4 Overview of the Designed Multi-Modal AVC . . . 122

6 Simulation and Experimental Verification 127
6.1 Simulation of Multi-Modal Active Vibration Control . . . 127
6.1.1 Simulation of AVC with 2D Models in Setup B2 . . . 128
6.1.2 Simulation of AVC with 3D Models in Setup C . . . 129
6.2 Experimental Verification of the Designed Controller . . . 132
6.2.1 AVC of Vertical Modes in Setup B2 . . . 133
6.2.2 AVC of the Stress-Ribbon Bridge in Setup C . . . 135
6.2.3 AVC of Superposed Resonance Vibration in Multiple Modes . . . 139
6.3 Active Vibration Control of Pedestrian Induced Vibration . . . 143

7 Conclusions and Recommendations 151
7.1 Conclusions . . . 151
7.2 Recommendations for Further Research . . . 153

Bibliography 155

Appendices **167**

A Time-Frequency Spectrum of the Bridge under Pedestrian Loading **169**

B Parameters and the Force Model of the PMAs **175**

C Sensibility Analysis of Changing Modal Characteristics Based on Root Locus Plot **179**

D Pedestrian-Induced Vibration With and Without AVC **191**

E List of Acronyms and Symbols **197**
