

Table of Contents

Abbreviations.....	i
List of Figures.....	iv
List of Tables.....	vi
Summary.....	vii
Zusammenfassung.....	ix
1. Introduction.....	1
1.1 The immune system.....	1
1.2 The innate immune response.....	2
1.2.1 TLRs and TLR signalling	3
1.2.2 Accessory pathways of TLR-induced cytokine production	6
1.3 The adaptive immune system	8
1.3.1 B cell subsets and their function in adaptive immunity.....	9
1.3.2 B cells as cytokine producers	10
1.4 IL-6	11
1.4.1 The IL-6 receptor complex.....	12
1.4.2 Functions of IL-6	13
1.4.3 Pathogenic roles of IL-6.....	14
1.5 Experimental autoimmune encephalomyelitis (EAE).....	15
1.6 The Unfolded Protein Response (UPR) and metabolic stress.....	15
1.6.1 The unfolded protein response in immunity.....	18
1.7 Aims of the thesis	20
2. Material	21
2.1 Cell culture Media, buffers and solutions	21
2.2 Magnetic beads and reagents for cell isolation.....	21
2.3 Antibodies and staining reagents for FACS.....	22
2.3.1 Discrimination of dead cells	23
2.4 Antibodies and reagents for Western Blot (WB)	23
2.5 Inhibitors and agonists for cell stimulation	24
2.6 Bioplex.....	25
2.7 Stress treatments	25
2.8 Generation of CRISPR/Cas9 KO cell lines	26

2.9 PCR and Cloning	27
2.10 RNA Isolation and Reverse Transcription.....	27
2.11 Light Cycler and TaqMan® Assays.....	27
2.11.1 Primers for quantitative RT-PCR	28
2.12 Mice.....	29
2.13 EAE induction and Salmonella infection	30
2.14 Devices and cell culture equipment	30
3. Methods.....	31
3.1 Cell Preparations.....	31
3.1.1 Preparation of single cell suspension of lymphoid organs	31
3.1.2 Isolation of peritoneal cavity B cells.....	31
3.1.3 Isolation of B cell subsets via fluorescence-activated cell sorting (FACS) or magnetic cell sorting (MACS)	31
3.1.4 Plasma cell isolation	32
3.1.5 Isolation of cells from CNS	32
3.1.6 Isolation and generation of bone marrow derived macrophages	34
3.1.7 Isolation of human B cells.....	34
3.1.8 <i>In vitro</i> Stimulation of B cells.....	35
3.2 Flow Cytometry	35
3.2.1 Surface staining	35
3.2.2 Intracellular IL-10 staining.....	35
3.3 Bioplex.....	36
3.4 Western Blot.....	36
3.5 Molecular biology methods	37
3.5.1 Isolation of total RNA and reverse transcription	37
3.5.2 Quantitative PCR analysis	37
3.6 Generation of KO cell lines using the CRISPR/Cas9 Technology.....	37
3.7 RNA isolation and Affymetrix microarray hybridization.....	41
3.8 EAE induction.....	41
3.9 Statistical Analysis	42
4. Results.....	43
4.1 The role of the PI3K pathway in B cell development and cytokine production	43

4.1.1 <i>In vitro</i> -activated CD1d ^{high} B cells express IL-10 and IL-6.....	43
4.1.2 The PI3K pathway is essential for IL-10 and IL-6 expression by B cells.....	45
4.1.3 B cells from mice that express constitutive active Akt do not express higher levels of cytokines per cell but have an altered development towards MZ-like B cells	48
4.1.4 rpS6 is a downstream target of Akt and participates in MZ B cell development	55
4.2 Implications of metabolic stress on IL-6 expression of B and Plasma cells	58
4.2.1 Identification of a pharmacological agent that promotes IL-6 expression and ER stress in B cells.....	58
4.2.2 ER stress induces <i>Il-6</i> expression and potentiates IL-6 secretion of activated B cells	64
4.2.3 Activation of the GCN2/Eif2 α /ATF4 pathway by amino acid deprivation enhances IL-6 secretion of LPS-activated B cells	68
4.2.4 Transcriptional induction of <i>Il-6</i> mRNA but no increase of IL-6 protein secretion upon pharmacological ER stress induction in human B cells.....	70
4.2.5 <i>Il-6</i> mRNA expression can be increased in stimulated murine blood B cells upon ER stress whereas IL-6 secretion remains unaffected.....	71
4.2.6 The transcription factor ATF4 but not spliced XBP1 plays a major role in ER stress-induced IL-6 expression in a B lymphoma cell line	73
4.2.7 Transcriptional block of IL-6 expression in Plasma cells is released upon metabolic stress	80
4.3 ER stress and IL-6 expression during EAE.....	84
4.3.1 IL-6 expression is induced in CD45 ⁻ cells in the CNS of mice suffering from EAE	84
4.3.2 Astrocytes show a dramatic upregulation of <i>Il-6</i> during EAE	86
5. Discussion	93
5.1 The role of the PI3K pathway in B cell development and cytokine production	93
5.2 Implications of metabolic stress on IL-6 expression of B and Plasma cells	100
5.3 Astrocyte expression of <i>Il-6</i> during EAE correlates with onset of disease symptoms and expression of <i>Gfap</i> , a marker for neurological damage.....	105
6. Bibliography.....	110
Appendix	I
Eidesstattliche Erklärung	II
Curriculum Vitae	III
Publications	IV
