

Table of Contents

Summary	i
Zusammenfassung	iii
Publications	vi
Declaration	x
Table of Contents	1
Motivation	1
Introduction	3
1. Hydrogenases	3
<i>Classification and Appearance</i>	3
<i>[NiFe]-hydrogenases</i>	5
<i>[NiFe]-hydrogenases of <i>Ralstonia eutropha</i></i>	6
2. Iron-Sulfur Clusters	20
<i>Different classes of iron-sulfur clusters</i>	21
<i>Fine-tuning the redox potential of iron-sulfur clusters</i>	26
Methodological Introduction	28
3. Protein X-ray Crystallography	28
<i>Crystallization</i>	28
<i>X-ray analysis</i>	38
Methods	
1. <i>Re</i> MBH – the as-isolated state	52
<i>Crystallization</i>	52
<i>Structure analysis</i>	52
2. Ascorbate-treated <i>Re</i> MBH	54
<i>Crystallization</i>	54
<i>Structure analysis</i>	54
3. Changing the enzymatic bias – <i>Re</i> MBH-D117S ^L variant in the reduced and as-isolated states	55
<i>Crystallization</i>	55
<i>Structure analysis</i>	56
4. Structural analysis of the three proximal [4Fe3S] cluster variants (C19G ^S , C120G ^S and C19G ^S /C120G ^S) of <i>Re</i> MBH in the reduced and as-isolated states	57
<i>Crystallization</i>	58
<i>Structure analysis</i>	58
5. Structural analysis of the medial [3Fe4S] cluster variant P242C ^S of <i>Re</i> MBH in the reduced and as-isolated states	59
<i>Crystallization</i>	59
<i>Structure analysis</i>	60

6.	Structural investigation of the <i>ReMBH-C19G^S/C120G^S/P242C^S/H187C^S</i> variant in the reduced and as-isolated states	61
	<i>Crystallization</i>	61
	<i>Structure analysis</i>	62
7.	Time-resolved structural data of the in-situ oxygen-triggered inactivation process of <i>ReMBH</i>	63
	<i>Crystallization</i>	63
	<i>Sample delivery and incubation experiments of ReMBH</i>	63
	<i>Structural analysis</i>	64
Results		66
1.	The as-isolated state of <i>ReMBH</i>	66
	<i>The [NiFe] active site of the as-isolated states 1-3 of ReMBH</i>	69
	<i>Redox-dependent conformational changes at the proximal cluster</i>	71
	<i>Potential proton transfer pathways</i>	72
	<i>A potential water channel</i>	73
2.	The ascorbate-soaked <i>ReMBH</i>	74
	<i>The [NiFe] active site of the ascorbate-soaked ReMBH</i>	76
	<i>The proximal [4Fe3S] cluster of the ascorbate-soaked ReMBH</i>	76
3.	Changing the catalytic bias – D117S ^L variant of <i>ReMBH</i>	77
	<i>Preliminary experimental data</i>	77
	<i>Structural overview of ReMBH-D117S^L</i>	78
	<i>Structural changes of the [NiFe] active site in the ReMBH-D117S^L variant</i>	80
	<i>The iron-sulfur clusters in ReMBH-D117S^L</i>	87
4.	Structural analysis of the proximal [4Fe3S] cluster variants in <i>ReMBH</i>	88
	<i>The [NiFe] active site of the proximal cluster variants in ReMBH</i>	91
	<i>Structural changes at the proximal cluster of the ReMBH proximal cluster variants</i>	92
5.	Structure analysis of the medial [3Fe4S] cluster variant of <i>ReMBH</i>	100
	<i>Overview of the ReMBH-P242C^S crystal structures</i>	100
	<i>The [NiFe] active site of the ReMBH-P242C^S variant</i>	102
	<i>The iron-sulfur clusters of ReMBH-P242C^S</i>	103
	<i>The water channel of the ReMBH-P242C^S variant</i>	106
6.	<i>ReMBH-C19G^S/C120G^S/P242C^S/H187C^S</i> variant reveals a homologous Cys ₄ -[4Fe4S] cluster relay	107
	<i>Structural overview of ReMBH-C19G^S/C120G^S/P242C^S/H187C^S variant</i>	107
	<i>The [NiFe] active site of the ReMBH-hom</i>	109
	<i>The three homologous Cys₄-[4Fe4S] clusters in ReMBH-hom</i>	110
7.	Time-resolved structural data of <i>ReMBH</i> by Serial-femtosecond X-ray crystallography at the X-FEL	114
	<i>Time-resolved structural data of the oxygen-triggered inactivation of ReMBH</i>	115
Discussion		126
1.	The as-isolated state of native <i>ReMBH</i>	126
	<i>The [NiFe] active site in the as-isolated state of ReMBH</i>	126
	<i>The redox-dependent conformational changes at the unique proximal cluster in the as-isolated states</i>	128

<i>Proposed proton transfer between the proximal [4Fe3S] cluster and the [NiFe] active site</i>	133
<i>Mode of action of MBH based on the insights of the as-isolated state</i>	134
2. The ascorbate-soaked ReMBH – a partially reduced state	135
3. Changing the catalytic bias – D117S ^L variant of ReMBH	136
<i>The [NiFe] active site of the ReMBH-D117S^L variant</i>	137
<i>The iron-sulfur clusters of ReMBH-D117S^L</i>	143
<i>The potential proton transfer pathway in the ReMBH-D117S^L variant</i>	144
<i>The role of Asp117^L within the mode of action of MBH</i>	144
4. Structural analysis of the proximal [4Fe3S] cluster variants in ReMBH	144
<i>The [NiFe] active site of the three proximal cluster variants in ReMBH</i>	144
<i>The input of the proximal [4Fe3S] cluster towards oxygen-tolerance</i>	147
<i>Various water accessibilities in the proximal cluster variants of ReMBH</i>	153
<i>The potential proton transfer pathways in the proximal cluster variants of ReMBH</i>	154
<i>Potential maturation model based on structural data of ReMBH proximal cluster variants</i>	157
<i>Summary of the proximal cluster variants of ReMBH</i>	158
5. Structural analysis of the medial [3Fe4S] cluster variant ReMBH-P242C ^S	159
<i>The [NiFe] active site of ReMBH-P242C^S</i>	159
<i>The [FeS] clusters in ReMBH-P242C^S</i>	160
<i>Changes in the enzymatic mechanism in the ReMBH-P242C^S variant</i>	163
6. ReMBH-C19G ^S /C120G ^S /P242C ^S /H187C ^S variant creates a homologous Cys ₄ -[4Fe4S] cluster relay	164
<i>The [NiFe] active site of ReMBH-hom</i>	164
<i>The three Cys₄-[4Fe4S] clusters of the ReMBH-hom variant</i>	166
<i>Variations in the potential proton pathways in ReMBH-hom</i>	171
<i>Summary of the ReMBH with the homologous Cys₄-[4Fe4S] cluster electron relay</i>	171
7. Time-resolved structural data of the oxygen-triggered inactivation of ReMBH	172
<i>Structural snapshots of the [NiFe] active site of native ReMBH</i>	173
<i>Structural snapshots of the proximal [4Fe3S] cluster in ReMBH</i>	173
<i>Structural snapshots of the proton pathways in ReMBH</i>	180
<i>The inactivation process of MBH revisited</i>	181
Conclusion & Outlook	183
