Preface	I
Declaration of authorship.....	II
Acknowledgements	III
Abstract	IV
Kurzfassung.....	V
Summary	VI
Zusammenfassung	X
Table of content.....	XV
List of Figures	XVIII
List of Tables	XXII
List of Pictures	XXV
List of Appendices	XXVI
List of Abbreviations	XXVII
List of Symbols	XXX
List of Units.....	XXXI
Terminology.....	XXXIII
1 Introduction, goal and objectives	1
2 Background	7
2.1 Palm oil and oil palm.....	7
2.2 The history of the palm oil industry in Indonesia	7
2.3 Legislation on palm oil production and consumption.....	8
2.4 Crude palm oil production	8
2.4.1 Agricultural stage in palm oil mills.....	10
2.4.1.1 Residual biomass	12
2.4.1.2 Nutrient demand in agriculture	13
2.4.1.3 Collection and transport in plantation	13
2.4.2 Palm fruit processing	13
2.4.2.1 Residues of palm fruit processing	15
2.4.2.2 Additional requirements in palm fruit processing	17
2.4.3 Residual biomass treatment of CPO production.....	18
2.4.3.1 Application of solid residues of CPO production onto soil	18
2.4.3.2 Treatment of liquid effluent (POME) from fruit processing.....	18

Table of content

2.4.3.3	Degradation processes of residual biomass.....	20
2.5	Emissions from palm oil production	21
2.5.1	Emissions from the agriculture stage and soil application of residual biomass.....	21
2.5.2	Emissions from palm fruit processing	22
2.5.3	Emissions derived from residual biomass treatment	22
2.6	Origin of greenhouse gas emissions from residual biomass.....	22
2.6.1	Carbon dioxide CO ₂	22
2.6.2	Methane CH ₄	23
2.6.3	Nitrous oxide N ₂ O.....	23
2.7	Cleaner production in CPO production	24
2.8	Material-, substance- and energy flow analysis	25
2.9	Quantifying diffuse surface emissions – theory.....	26
2.10	Measuring diffuse surface emissions	26
2.10.1	Flux chamber – gas capture	27
2.10.2	Photo acoustic field gas monitor INNOVA 1412-5 – direct gas measurement.....	29
2.11	Statistical analysis.....	30
3	Material and methods.....	31
3.1	Research sites in Indonesia.....	33
3.2	System boundaries and functional units	34
3.3	Data collection	36
3.3.1	Data gathering for mass, energy and substances	36
3.3.2	Basis for calculations of greenhouse gases (GHG).....	38
3.3.2.1	Greenhouse gas emissions from agriculture stage (biomass growth)	39
3.3.2.2	Greenhouse gas emissions from fruit processing (mill).....	41
3.3.2.3	Greenhouse gas emissions from residual biomass treatment/dumping.....	41
3.4	Measurement of emissions from residual biomass treatment.....	42
3.4.1	Set up of measurement equipment used for emission measurement.....	43
3.4.2	Measurement procedure	44
3.5	Data processing.....	48
3.5.1	Material- and energy flows.....	49

Table of content

3.5.2	Data processing to determine gas fluxes.....	49
3.5.3	Statistical data compilation and data evaluation.....	52
3.6	Scenario analysis current and optimized residual biomass treatment.....	54
4	Results.....	60
4.1	Material-, energy- and substance flow analysis.....	60
4.2	Calculated and measured GHG emissions.....	67
4.3	Statistical data evaluation.....	77
4.3.1	Additional data of investigated areas.....	83
5	Discussion.....	84
5.1	Material-, energy- and substance flow analysis.....	84
5.2	Cleaner production in palm oil production.....	87
5.3	Emissions from treatment/disposal scenarios of residual biomass.....	91
5.4	Measuring emissions of GHG from the application of residual biomass onto soil.....	93
5.4.1	Flux chamber handling in the field.....	94
5.4.2	Flux chamber and photoacoustic field gas monitor.....	96
5.4.3	Data processing and data evaluation.....	99
5.4.4	Interpretation of statistical data evaluations.....	102
5.5	Matters not addressed in this thesis.....	105
5.6	Recommendations and future research.....	106
5.6.1	Palm oil production.....	106
5.6.2	Lessons learned and technical improvement options on quantifying emissions using flux chambers.....	109
5.6.3	Lessons learned on using photoacoustic devices (PAS).....	111
6	Conclusions.....	113
7	Glossary.....	115
8	References.....	118
9	Appendix.....	138
