

Table of contents

1	Introduction.....	1
1.1	Motivation and goals	1
1.2	Structure of the thesis	3
2	Literature review	7
2.1	Basics of electrocatalytic water splitting.....	7
2.1.1	Hydrogen evolution reaction mechanism for alkaline water splitting.....	10
2.1.2	Oxygen evolution reaction mechanisms for alkaline water splitting	12
2.1.3	Activity metrics	14
2.1.4	Material libraries for electrocatalytic water splitting.....	15
2.2	Basics of heterogeneous photocatalysis.....	20
2.2.1	Mechanism of heterogeneous photocatalysis.....	21
2.2.2	Material libraries and design strategies for heterogeneous photocatalysis	23
2.2.2.1	Solar hydrogen generation using niobium-based photocatalysts: design strategies, progress, and challenges	25
2.2.2.2	Photocatalytic overall water splitting by SrTiO ₃ : progress report and design strategies	65
3	Results and discussion.....	88
3.1	Unveiling the electrocatalytic activity of bifunctional iron-niobium double perovskites for overall water splitting: a-site cation influence	88
3.2	Enhanced photocatalytic activity of direct Z-scheme K ₄ Nb ₆ O ₁₇ /carbon-rich melon heterostructures	113
3.3	Utilization of novel (KNbO ₃) _{1-x} (Ba ₂ FeNbO ₆) _x (x = 0.1, 0.2, 0.3) solid solutions for efficient photo-assisted Fenton degradation of methylene blue dye	130
4	Summary and outlook	154
5	References.....	159
	Symbols and abbreviations	166
	Acknowledgments.....	169
