

# Contents

<b>Preface</b>	<b>1</b>
<b>1 Introduction</b>	<b>7</b>
1.1 Programming Models . . . . .	7
1.2 Programming Parallel Architectures . . . . .	7
1.3 A Metaphor for Analysis and Synthesis . . . . .	9
1.4 The Need for Autotuning . . . . .	13
1.5 The Need of Multi-objective Tuning . . . . .	15
1.6 Motivations . . . . .	15
1.7 Objectives . . . . .	17
1.8 Outline . . . . .	17
<b>2 Program Analysis</b>	<b>19</b>
Contribution 1: SSA and Type-inference in PHP 7.1 . . . . .	21
Contribution 2: CFG Vectorization on ARM Processors . . . . .	32
Contribution 3: Limit of C++ Programming Models for Vectorization . . . . .	42
<b>3 High-level Programming Models</b>	<b>51</b>
Contribution 4: libWater . . . . .	53
Contribution 5: libWater on large-scale cluster . . . . .	64
Contribution 6: CELERITY . . . . .	76
<b>4 Domain-Specific Languages</b>	<b>89</b>
Contribution 7: OpenABL: A DSL for Agent-based Simulations . . . . .	91
Contribution 8: OpenABL on Large-Scale Simulations . . . . .	105
Contribution 9: OpenABL on Complex Hierarchical Models . . . . .	131
<b>5 Automatic Tuning</b>	<b>143</b>
Contribution 10: Automatic Heterogeneous Task Partitioning . . . . .	146
Contribution 11: Vectorization Cost Modeling . . . . .	157
Contribution 12: Autotuning for Stencil Computations . . . . .	159
Contribution 13: Multi-objective Tuning for Approximate Computing . . . . .	169
Contribution 14: Multi-objective Tuning for Energy Consumption . . . . .	179
<b>6 Conclusions</b>	<b>189</b>
6.1 Summary of the Results . . . . .	189
6.2 Open Questions and Future Work . . . . .	192
<b>Bibliography</b>	<b>193</b>
