ABSTRACT i

ZUSAMMENFASSUNG iii

List of Contents iv

List of Publications ix

1 Introduction 1

1.1 Motivation and Scope 1

1.2 Outline 3

2 Context of Virtual Power Plant Operation 5

2.1 European Electricity Spot Market 5

2.2 Virtual Power Plant 7

2.2.1 Definition and Structure 7

2.2.2 State of the Art on Virtual Power Plant Operation 8

3 Wind and Solar Power Integration in Electricity Markets and Distribution Networks through Service-Centric Virtual Power Plants 11

3.1 Introduction 11

3.2 Coordinated Day-ahead and Intraday Operation Sequence 12

3.3 Service-centric Operation 16

3.3.1 Energy Market Participation Service to Resources 16

3.3.2 Congestion Relief Service to Distribution System Operator 19

3.4 Case Study 22

3.4.1 Input Data 22

3.4.2 Modeling of Renewable Power Generation Uncertainties 25

3.4.3 Energy Market Participation 27

3.4.4 Congestion Relief Service 29

3.4.5 Comparative Analysis 32

3.5 Conclusions 32

4	Flexibility Market Platform for Power Flow Coordination in Transmission and Distribution Networks with High Share of Renewable Energy	35
4.1	Introduction	35
4.2	Overall Flexibility Market Platform Solution	37
4.3	Congestion Relief Actions	40
4.3.1	Requesting of Flexibilities by Transmission System Operator and Distribution System Operator	40
4.3.2	Identifying High-Impact Groups	41
4.3.3	Bidding of Flexibility Services and Formation of Merit Order List	45
4.3.4	Selecting and Validating Flexibility Bids	47
4.4	Application	47
4.4.1	Input Data	47
4.4.2	Requesting Flexibility by Transmission System Operator and Distribution System Operator	49
4.4.3	Identifying High-Impact Groups	50
4.4.4	Bidding of Flexibility Services, Formation of Merit Order List, Selection and Validation of Bids	53
4.5	Conclusions	56
5	Bidding Strategy of a Virtual Power Plant in a Flexibility Market for Relieving Congestion	57
5.1	Introduction	57
5.2	Information Exchange Sequence between Flexibility Market and Service-Centric Virtual Power Plant	58
5.3	Mathematical Formulation of Bidding Strategy	60
5.4	Case Study	64
5.4.1	Input Data	64
5.4.2	Bidding of VPPs in Flexibility Market	66
5.4.3	Comparative Analysis	70
5.5	Conclusions	70
6	Conclusions and Future Work	73
6.1	Conclusions	73
6.2	Future Work	74
A	Calculation of the AC Power Flow Sensitivities	77

B Modeling of Controllable Resources Within the Pool of a Virtual Power Plant	81
B.1 Combined Heat and Power Units	81
B.2 Storage Units	82
B.2.1 Electrical Storage	82
B.2.2 Thermal Storage	83
B.3 Electric Vehicles	84
C Supplementary Information for German Network Model	87
C.1 German Transmission Network	87
C.2 German Distribution Network	97
List of Symbols	99
References	107
