

Table of contents

Abbreviations	xi
List of figures	xx
List of tables	xx
1. Introduction	1
1.1. The antimicrobial resistance crisis	1
1.2. Antibiotic targets and resistance strategies.....	3
1.3. New strategies and antibiotic targets	7
1.4. The MerR-family of transcriptional regulators.....	10
1.4.1. Transcriptional regulation and multidrug resistance	10
1.4.2. The MerR-family of transcriptional regulators.....	11
1.4.3. Overview of other MerR-family members	14
1.5. Albicidin	17
1.5.1. Role as a phytotoxin	17
1.5.2. Structure elucidation of albicidin	18
1.5.3. Biosynthesis of albicidin in <i>X. albilineans</i>	20
1.5.4. Cell permeation and mode of action of albicidin	24
1.5.5. Antibacterial activity and structure activity relationship studies.....	26
1.5.6. Homologous structures of albicidin	28
1.6. Albicidin resistance strategies.....	30
1.6.1. Self-resistance in <i>X. albilineans</i> (AlbF, AlbG and gyrase).....	30
1.6.2. Blocking of the albicidin uptake by mutations in the Tsx-channel.....	33
1.6.3. Albicidin-binding proteins AlbA and AlbB	33
1.6.4. The serine endopeptidase AlbD	36
2. Aims of this study	40
3. Materials	41
3.1. Software and Webtools.....	41
3.2. Laboratory equipment.....	43
3.3. Consumables and expandable materials.....	44
3.4. Protein and DNA standards	45
3.5. Chemicals.....	45
3.6. Enzymes.....	45
3.7. Antibiotics.....	46
3.8. Kits	46

3.9.	Primers	46
3.10.	Vectors.....	49
3.11.	Bacterial strains	50
3.12.	Cultivation media	50
3.13.	Buffers and solutions.....	52
4.	Methods.....	55
4.1.	Molecular biology methods.....	55
4.1.1.	Preparation of chemically competent cells.....	55
4.1.2.	Transformation of chemically competent bacterial cells.....	55
4.1.3.	Plasmid isolation and DNA sequencing.....	55
4.1.4.	Amplification of DNA by polymerase chain reaction (PCR).....	56
4.1.5.	Agarose gel electrophoresis	56
4.1.6.	Gibson assembly® cloning.....	57
4.1.7.	Sodium dodecyl sulphate polyacrylamide gel electrophoresis (SDS-PAGE).....	57
4.2.	Protein biochemistry and assays.....	58
4.2.1.	Heterologous gene expression.....	58
4.2.2.	Protein purification of recombinant proteins	58
4.2.3.	In-gel tryptic digest.....	60
4.2.4.	Agar diffusion assay.....	61
4.2.5.	Protein crystallization and structure determination.....	61
4.2.6.	Fluorescence assay	62
4.2.7.	Electrophoretic mobility shift assay (EMSA)	63
4.3.	Analytical methods.....	66
4.3.1.	Circular dichroism (CD) spectroscopy.....	66
4.3.2.	HPLC-ESI-MS analytics of AlbD-albicidin cleavage products	67
4.3.3.	NMR spectroscopy.....	68
4.3.4.	Analytical size-exclusion (UV and MALS).....	70
4.4.	Chemical synthesis of albicidin and albicidin derivatives.....	71
5.	Results and discussion.....	72
5.1.	Albicidin-binding proteins AlbA and AlbB	72
5.1.1.	Bioinformatics analysis.....	72
5.1.2.	Albicidin-neutralizing effect and biophysical characterization of AlbA and AlbB	74
5.1.3.	The crystal structure of the AlbAS-albicidin complex	88
5.1.4.	The AlbAS tandem-repeat structure	99
5.1.5.	Binding behavior of AlbAS and AlbBS towards structural variations of albicidin.....	104

5.1.6.	A postulated albicidin-binding mechanism of AlbA	116
5.1.7.	Determination of the transcriptional regulation promoter sequence	121
5.1.8.	Summary.....	134
5.2.	The serine endopeptidase AlbD	135
5.2.1.	Hydrolytic cleavage of albicidin and its derivatives by AlbD	135
5.2.2.	The structure of the serine endopeptidase AlbD	138
5.2.3.	AlbD and EF-derivatives.....	140
5.2.4.	Enzyme kinetics with AlbD	145
5.2.5.	Summary.....	149
6.	Conclusions and future perspectives.....	150
7.	Appendix	157
7.1.	Plasmid maps.....	157
7.2.	Data from protein chromatography and SDS-PAGE.....	159
7.3.	Protein sequences	164
7.4.	Tryptic digest and sequences	165
7.5.	SEC protein standards	168
7.6.	Alignments.....	168
7.7.	LC/MS chromatograms.....	169
8.	References.....	176
